SYMPOSIUM DESCRIPTION

The IGS is a multi-discipline, multi-industry, and multi-society technical conference on Geomechanics. The symposium will kick off with a legacy training program, "Rock with Fellows", taught by three key speakers Mark Zoback (Stanford University), Herbert Einstein (MIT), John McLennan (University of Utah). It will play host to **145** technical papers in **15** technical sessions and **10** posters session. Co-organized by ARMA | DGS | SEG and endorsed by AAPG | EAGE | SPE | SPWLA, IGS expects over **200** technical attendees from more than **35** countries over six continents.

This symposium is a global Geomechanics summit for more than **70** world's leading NOCs, IOCs, Service Companies and Universities. Focusing on the role of geomechanics in energy efficiency and sustainability, the technical program will cover a wide range of geomechanics topics, from rock, in-situ stress, natural fractures, faults, drilling, completion, stimulation, production, and reservoir engineering, and showcase geomechanics applications in CO2 sequestration, hydrogen storage, and new energies.

TECHNICAL SESSIONS:

- Drilling Geomechanics in Naturally Fractured Reservoirs
- Rock and In-situ Stress Characterization
- 3D Reservoir Geomechanics for Field Development
- Drilling Geomechanics
- Energy Storage
- Structural Geomechanics and Tectonics
- Artificial Intelligence and Data Science in Geomechanics
- In-situ Stress Estimate and Modeling
- Shear Physics and Frictional Dynamics
- Hydraulic Fracturing
- CO2 Sequestration and Utilization
- Induced Seismicity/Faults Hydromechanical Behavior

POSTER SESSIONS:

- CO2 Sequestration and Utilization
- New Technology
- Production, Depletion and Completion Geomechanics
- Wellbore Instability
- Sanding and Debris Production
- Digital Rock and Rock Physics
- 3D Reservoir Geomechanics for Field Development
- Rock Measurement and Characterization
