## SYMPOSIUM DESCRIPTION

The IGS is a multi-discipline, multi-industry, and multi-society technical conference on Geomechanics. This year, the multi-society multi-discipline multi-industry event will focus on the role of Geomechanics for Efficient and Sustainable Energy Supply. The symposium will kick off with a legacy training program, "Rock with Fellows", offered by Priscilla Nelson on Mining (Colorado School of Mines), Maurice Dusseault on Energy Storage (University of Waterloo), and John McLennan on Geothermal (University of Utah), as well as a keynote by Mark Zoback on Unconventional Resources (Stanford University).

It will play host to over **234** presentations in **30** technical sessions. IGS expects more than **450** technical attendees from more than **35** countries in six continents. This symposium is a global geomechanics summit for more than **140** of the world's leading NOCs, IOCs, service companies, and universities. Focusing on the role of geomechanics in energy efficiency and sustainability, the technical program will cover a wide range of geomechanics topics, from CO2 sequestration, hydrogen, mining, geothermal to applications in petroleum exploration, drilling, completion, hydraulic fracturing, production, and reservoir engineering.

We invite all rock jockeys from operators, technology developers, service providers, researchers, and students to exchange geomechanics experience and knowhow among technology developers, providers, and practitioners.

## TECHNICAL & POSTER SESSIONS

- CO2 Sequestration & Utilization
- Fundamental Geomechanics
- Geomechanics for Geothermal & New Energies
- Petroleum Geomechanics
- Drilling Geomechanics
- Subsurface Hydrogen and Energy Storage
- Structure Geomechanics
- Mining Rock Mechanics
- Geomechanics for Unconventionals
- Hydraulic Fracturing
- Integrated Case Studies
- Hydraulic Fracking
- Machine Learning/AI
